Answer. Top Answer. Wiki User Answered . 2014-09-19 12:24:54 ...

There are no operators in the question and so the distributive property has no relevance to the question.

File Type PDF Distributive Property Questions And Answers

The distributive property combines? - Answers

as for this, the part with the distributive property is only $2(4x+3)$. the 7 is added to whatever you get there. so when you distributed the second part, just combine like terms. $7+2(4x-3) = 7+8x-6 = 1 + 8x$. the other problems are just like this. try them yourself. they are good practices. if you know how to multiply and add, you can do those.

Distributive Property questions? | Yahoo Answers

Answer. Top Answer. Anonymous Answered . 2020-09-21 19:07:03 ... There are no operators in the question and so the distributive property has no relevance to the question. What does distributive property mean in addition? Addition, by itself, does not have a distributive property.

What is the Distributive Property of 8x71? - Answers

File Type PDF Distributive Property Questions And Answers

Distributive Property of Multiplication Over Subtraction: Distributive property of multiplication over subtraction is the same as that in case of addition. However, the only change is that the difference of the individual products is found to arrive at the final answer.

Distributive Property - Basics, Examples and Important FAQs

Answer: To express the sum of two numbers using distributive property, we factor out the highest common factor (HCF) of the two numbers (i. e. the greatest number that can divide the two numbers without remainder) $28 = 2 \times 2 \times 7$ $42 = 2 \times 3 \times 7$ The HCF of 28 and 42 is given by $2 \times 7 = 14$

Use the distributive property to express $28+42$

Use of the Distributive Property in Algebra - Grade 6

Solution for 6. Use the distributive property to simplify: $3(5x-8y)$ [A] $15x-8y$ [B] $15x+24y$ [C] $5x-8y$ [D] $15x-24y$

Answered: 6. Use the distributive property to... | bartleby

Suppose x , y and z are elements of a set

File Type PDF Distributive Property Questions And Answers

and $\#$ and \sim are two binary operations defined on the set. Then, the distributive property of $\#$ over \sim states that for all elements x , y and z in the set, $x \# (y \sim z) = x \# y \sim x \# z$. A common example is $\# =$ multiplication and $\sim =$ addition (or subtraction). In that case, the distributive property of multiplication over addition states that $x \cdot (y + z) = x \cdot y + x \cdot z$.

How does distributive property works? - Answers

Image Transcriptionclose. Use the GCF and the Distributive Property to find the sum. $42 + 66$ Write each number as a product using the GCF as a factor, and apply the Distributive Property. $42 + 66 =$ (Use the operation symbols in the math palette as needed.)
