Convert your car to run on compressed Air

Any air vehicle with one of these engines will be able to hold approximately 3,200 cubic feet of compressed air which will be released slowly as the vehicle's accelerator will operate a valve on the tank that will let air slowly be released through a pipe into the engine. In the engine, the air will power the pistons and crankshaft which will create enough power to run the vehicle 30-35 miles per hour. If the vehicle goes faster than those speeds, a motor will start and operate an additional ...
