IDENTIFICATION

Abstract: This paper discusses the typical image enhancement algorithms such as median filtering, average smoothing, homomorphic filtering and histogram equalization. These algorithms are also verified based on Matlab. In the last part of the paper, the pre- and post processing image using these algorithms are shown.

The output text file contains the x and y positions of fluorophores, their intensity and so on.

Read PDF Text Document Image Restoration

Pairs of fluorophores should be separated by a distance of about 12800nm (although this can vary slightly), so I was thinking of using this separation to exclude fake spots (as they don't have a partner at that distance).
