The Steering wheel rotation speed unilateral trigger was used to detect fast steering actions. The trigger performance was assessed on 600 annotated events, where SCEs and SREs prevalence were 2.7% and 7.2%, respectively. Detection of SCEs was performed with an average precision of 5%, resulting in a 1.8-fold improvement over random sampling.

Evaluation of safety critical event triggers in the UDrive ...

The only "trigger" that can help you is if it is related to the physical wheel itself, rather than the sequence of numbers. For example, if you decide to bet the number 3 after noticing that over 10,000 spins it wins at a higher percentage, then this is called bias analysis.

Trigger holdoff is an adjustable period of time after a valid trigger during which the oscilloscope cannot trigger. This feature is useful when you are triggering on complex waveform shapes, so that the oscilloscope only triggers on an eligible trigger point.

Oscilloscope Systems and Controls: Functions & Triggering ...

Since the trigger wheel is made of a ferrous material, it pulls the magnetic field to the shutter. At this point the Hall element no longer has a magnetic field penetrating it and no Hall voltage is created. Without Hall voltage, the differential amplifier has no output to the Schmitt trigger.

Cause & Effect: Troubleshooting Hall Effect Sensors | MOTOR

If you ignore it, unbalanced wheels will trigger problems with shocks, tread, and other suspension or steering components. The only way to fix this issue is to make sure your wheels are balanced. Also, see to it that your tire is lightly trodden and is in good condition. 2.

Top Five Causes of Steering Wheel Vibration

27th April, 2018. Understanding Your HAVS Trigger Times. HAVS trigger times are how long your hands and arms are actually exposed to vibration. Trigger times can often be overestimated because they are not fully understood, in this post we look at what trigger times are and how to measure them when assessing vibration exposure.

Understanding Your HAVS Trigger Times - HASpod

Inspect trigger for physical damage and proper operation. (None foreseen) Make sure the materials being ground are adequately secured and positioned correctly Injuries associated with the work propelled by the grinder and/or landing on you Verify the work is adequately secured by trying to dislodge it with a gloved hand (the work weight may secure it enough).

JOB SAFETY ANALYSIS - Brieser Construction

You are probably right about it being a trigger finger issue, with the finger having up/down or left/right movement during the trigger pull or follow-through instead of coming straight back. Let her rest up a bit so that she has a "fresh" finger, and then - with a SAFE, UNLOADED pistol with some snap-caps - try some dry fire practice with you watching her trigger finger closely.
